The healthiest sleep option for babies

The PurFlo Cot Mattress is unique in that it is a totally hollow and completely washable mattress providing a clean, safe, chemical and allergen free sleeping environment for babies.

The PurFlo mattress has a breathable mesh surface allowing free air circulation eliminating the risk of re-breathing CO² and the hollow design prevents a buildup of House Dust Mites, bacteria and fungi which are known to trigger allergies such as Asthma and Eczema.

Acclaimed by leading UK health specialists concerned with infant

allergies and Sudden Infant Death Syndrome (SIDS), the PurFlo mattress provides a thermo neutral sleeping environment preventing the baby from overheating or getting too cold and gives better support than a conventional mattress.

Additionally, the PurFlo mattress is more hygienic than

traditional foam or sprung cot mattresses as it can be washed over and over again at 60°C to provide a clean, bacteria-free sleeping environment. The mattress can be easily dismantled and carried in its own compact carry case to take along when travelling or staying away from home.
